

'6 Signs You Need to Replace Your Furnace' According to the Pros

1. Rising Energy Bills

If you've noticed a steady increase in your energy bills without a corresponding increase in usage, your furnace may be losing efficiency. Older furnaces have to work harder to heat your home, leading to higher utility costs.

2. Strange Noises

Unusual sounds such as banging, rattling, popping, or squealing are often signs of mechanical problems or parts wearing out. Persistent noise issues usually indicate that your furnace is on its last legs.

3. Yellow/Flickering Burner Flame

A healthy furnace flame should be blue, which indicates proper combustion. A yellow or flickering flame can signal the presence of carbon monoxide or other dangerous gases. This is a serious safety concern and a strong sign that your furnace needs to be replaced.

4. Excessive Dust in Home

If your home feels excessively dry or dusty, or if you notice more frequent allergy or respiratory issues among family members, your furnace may not be effectively filtering and circulating air. Old furnaces can struggle with humidity control and air quality, making replacement a smart move.

5. Uneven Heating/Cold Spots

If some rooms are warm while others are cold, it could mean that your furnace is struggling to distribute heat evenly throughout your home. This can be a sign of a failing system, especially if accompanied by other issues like noisy operation.

6. Age of Furnace

A diligently-maintained furnace has a lifespan of 15-20 years. If your furnace is approaching or has surpassed this age, it's likely time to consider a replacement, as older units are less efficient and more prone to breakdowns.

Time for a New Furnace?

Replacing your furnace improves your home's comfort and safety and can save you money on energy bills in the long run. If you notice any of these signs, call us to schedule an inspection today to discuss your options. With purchase of a new Carrier Furnace before 12/31/2024, present this coupon to get:
